

Meet the people behind the technology.

Ray Dawson

Global Director, Product Advocacy

In this function, Dr. Dawson coordinates the development and sharing of product information with legislative, regulatory, and other stakeholder groups at company and industry sectors so chemical policy development can be based on sound data and interpretation. Much of Dr. Dawson's focus is spent in the political and regulatory arena concerned with flame-retardants.

Dr. Dawson joined Albemarle's predecessor company, Ethyl Corporation in 1978, at Bracknell, England, where he held a range of managerial positions in R&D, manufacturing, marketing, and sales. In 1989, he transferred to Baton Rouge taking successive assignments in new business development, R&D, and global business management. Dr. Dawson currently serves as Chairman of the Bromine Science and Environmental Forum, the industry association representing the major global bromine producers.

Dr. Dawson is a graduate of Imperial College of Science, Technology, and Medicine in London, where he also gained his Ph.D. in physical chemistry.
